HAND GRENADE SCALE

We were sent a clip from one of our members in the Miami area. We would like to quote:

"If you have hibiscus and want to keep them, better check NOW for hand granade scale which is a very serious problem throughout most of Dade County. The scale is heaviest around the nodes and can be seen by using a hand glass. Another clue to its presence: leaves become smaller, turn yellow, brown and fall. For control, spray three times at two week intervals with Cygon, 43.5 per cent at a pint to 100 gallons of water or one tablespoon to a gallon. You can also use Ethion, 46 per cent EC at one pint to 100 gallons of water or one tablespoon to the gallon."

When you use these sprays don't be surprised if some leaf loss occurs. They will usually pop out again with new growth.

ROARING LIONS

If you hear some roaring coming from the Norman Reasoner Chapter, it really means that they are happy because they have several Lions among them.

Vice-president Ralph Niffenegger has just been installed as president of the Bradenton Club of Lions International; Past President Jim Wallace is a past president of the Manatee River Lions Club; Paul Gillilan is past zone chairman; Floyd Thuma was recently honored for 37 years attendance and service, and has held local, state and district offices.

This item was NOT submitted by Lion Jimmie Monroe.

"Oh, are you going to have a baby?"
"No, - - - I'm carrying this for my husband."
